

MiRiDom

DNS configuration for pointing miridom.org to the new website

Hello Terry,

DNS records to add

#	Type	Host / Name	Value / Target	TTL
1	A	@ (root, miridom.org)	216.24.57.1	Default / Auto
2	CNAME	www (www.miridom.org)	miridom-site.onrender.com	Default / Auto

Notes

- Root domain (miridom.org): A record → 216.24.57.1
- www subdomain (www.miridom.org): CNAME record → miridom-site.onrender.com
- If your DNS provider does not allow a record on the root domain, an ANAME or ALIAS record pointing to miridom-site.onrender.com works as well.
- These two records are the only ones needed for the website. Please leave any existing records (MX, TXT, etc.) unchanged so email and other services keep working.

Temporary site link (for review): <https://miridom-site.onrender.com>

Thanks,

Marcellin
